

# Perforated Metal

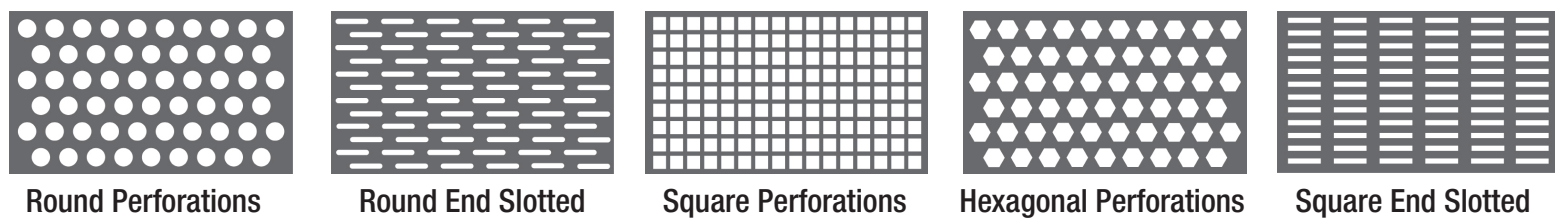

Graepels Perforation sizes range from 0.5mm to 150mm on material thicknesses of 0.5mm to 25mm thick.

## Perforated Metal Considerations:

% Open Area (ventilation, transparency, etc.) Material thickness and material type,  
Perforation size, pattern and type (flush, embossed, etc.) Margins i.e. solid area/unperforated area

**Perforated Metal 'Standard Shapes'.** Bespoke and decorative perforations are available. For more visit Graepels.com

**Balustade Infill** - specifically for public areas we recommend GRAE F 40/63/95. 60 supplied by Graepels Perforators & Weavers Ltd. as approved by Architect: 4mm pregalvanised mild steel perforated balustrades with a 50mm blank margin all round, rounded corners to engineer's specification (Refer to Architects drawing XXX): fixed by others
